

Project: "Private School Website" (PART TWO)

Objective:

Enhance the website created in **Part One** by incorporating interactivity, advanced JavaScript and jQuery functionalities, and leveraging Bootstrap for a responsive design.

Features:

1. Bootstrap Template Integration:

- Choose a free Bootstrap template and customize it to match the school's theme (colors, fonts, etc.).
- Make sure the template is fully responsive.

2. Interactive Features Using JavaScript:

Implement the following **4 JavaScript functionalities**:

- **Dynamic Welcome Message:** Add a JavaScript function that displays a dynamic welcome message on the homepage based on **the current time** ("Good Morning!", "Good Evening!", "Good Afternoon!").
- **Image Carousel:** Integrate a Bootstrap carousel (or a manual implementation using JavaScript) to showcase school events or campus photos.
- **Form Validation:** Add custom JavaScript validation for the "Admissions Form" (check for empty fields, valid email format, phone number length). If all inputs are correctly filled out, display an alert with the message: "Form submitted successfully!"
- **Scroll to Top Button:** Implement a "Scroll to Top" button that appears when the user scrolls down, using JavaScript.
- **Accordion Description:** Add a vertically collapsing accordion Bootstrap component to display descriptions for the list of classes/grades offered on the "Academics" page. Each class/grade can be expanded or collapsed to show or hide its description dynamically.

3. Advanced jQuery Features:

Implement the following **5 jQuery functionalities**:

- **Hover Effects:** Add hover effects (e.g., color changes or animations) to navigation bar items or buttons using jQuery.
- **Content Filter/Search:** On the "Academics" page, allow users to filter classes dynamically using a jQuery search bar.

- **Event Countdown Timer:** Display a countdown timer for an upcoming school event (e.g., Open House Day) using jQuery.
- **Add the following inputs to the Admissions Page form:**
 - a. Date of Birth: Include a calendar input to select the student's birth date.
 - b. Upload an Identity Picture: Provide an option to upload a photo for identification.
 - c. Preferred Language: Add the options: Arabic, English, French, and Other.
 - When “Other” is selected, an additional input field should appear, allowing the user to specify their preferred language.

4. **Responsive Design with Bootstrap:**

- Ensure that all pages are mobile-friendly and look good on different screen sizes using Bootstrap’s grid system and utility classes.

Expected Outcome:

- An updated 5-page website with a fully integrated Bootstrap template.
- JavaScript and jQuery scripts providing the required interactivity.
- Clear, responsive design optimized for mobile and desktop views.

Note: Please remove any additional pages from the template. The submitted project must include only the pages of your website and the necessary folders.
